## ExecClip

Sometimes you need to launch documents from inside a flash exe projector, but there is a restriction to doesn't allow this.

ExecClip is a tool that helps to solve this problem, because it can load a simple bat file adding a filename.

Flash projector has another restriction to send parameters to a file, so you need to "save" the filename on clipboard.

A sample of code to make it work:

```
cmd = "myfile.pdf";  
System.setClipboard(cmd);  
fscommand("exec", "execClip.exe");
```

And this is enough to work.

You can download it from [here](#).
